

CYBER-INFORMATION SECURITY

The volume and severity of threats to your information, applications and infrastructure are growing at an alarming rate. With a deep understanding of this changing threat landscape, QED National helps organizations build and strengthen Cyber-Information Security capabilities. Utilizing industry standards, guidelines, best practices, (e.g. NIST Cybersecurity Framework, ISO 27000 family, etc.) and world class technologies, we tailor solutions to address your organization's specific risks and needs.

Assessments

QED National's expert team is here to assist your organization in the development of critical Information Security Management capabilities by providing Assessments and Recommendations in critical areas such as:

- Cyber Risk and Compliance Assessments
- Information Security Policy, Processes and Programs
- Information Security / Cyber Risk
- Critical Infrastructure and ICS / SCADA Cyber Security
- Security Architecture
- Incident Response / Incident Handling
- Secure SDLC – Application Accreditation
- Security Operations

Design and Implementation Services

We provide professional services for the design and implementation of effective Security Management Systems and Security Controls addressing:

- Security Policy, Standards and Procedures Management
- Security Information and Event Management
- Applications and Infrastructure Security Controls
- Identity & Access Management
- Secure Systems Development
- Technology Life-Cycle Management (e.g. End-of-Life)
- Asset Management
- Vulnerability Management
- Patch Management
- Threat Intelligence
- Intrusion Detection

Right on the mark.

QED National. Problem Solved.
